OT

Treatment Encounter Notes

Information needs to relate back to the diagnoses, treatment plan, and goals. Must detail skilled intervention with use of therapeutic terminology: ***Evaluate, Fabricate, Facilitate, Inhibit, Desensitize, Establish, Assess, Analyze, Modify, Grade, Develop, Design, Optimize, Stabilize, Educate, and Train.***

Frame work:

1. What did you do? And Why (related to functional aspect)?
2. What was the resident's response to treatment? (Are there barriers to progress?)
3. What will you do next based on the response (Plan)?

TENs Examples:

97110	Therapeutic Exercise	Pt participated in a progressive resistive exercise through the use of Nustep to facilitate UE strengthening to overcome gravity when performing functional reach components of dressing and bathing. Pt required Min A to sustain a prolonged (B) grasp on upper handles indicating a decrease symmetry of reciprocal body integration. To support cardiac rehabilitation, pt required 02 saturation checks post 3 mins of dynamic activity, with readings averaging between 91% and 93% with rapid therapeutic recovery <30 Sec to 97%.
97112	Neuro Re-Ed	Pt seated on mat with posterior support. Patient challenged to cross midline with R hand, and then L. Loss of balance noted when crossing with L hand. Additional proprioceptive support from therapist to hips to assist with base of support. Cues provided for patient to use opposing arm to maintain balance on mat.
97530	Therapeutic Activities	Sitting balance at the edge of mat addressed in order to increase independence with transfers. Patient required SBA for static sitting balance at edge of mat for 3 minutes, then patient fatigued and required MIN A. Patient was able to transition from sitting upright to leaning to right side on her elbow with Min A. Patient was unable to return to upright sitting without Mod A. This was repeated five times to increase overall trunk strength. Plan for next treatment session is to continue to address sitting balance to increase independence with Transfers. Will add trunk exercise to increase trunk strength and stability.
97535	Self-Care	Therapist educated patient in LB dressing with use AE including sock aid, Reacher, and front wheeled walker. Patient required Min A with emphasis on training of weight shifting forward secondary to posterior loss of balance. Pt increased effective clothing management increasing from Mod to Min A and from 5 to 2 verbal cues. Next session to focus on dynamic balance to increase I and decrease risk of falls during LB dressing tasks.
97542	Wheelchair Management	Therapist positioned pt on mat to assess sitting alignment. Noted left posterior lean when sitting unsupported. Pt placed in wheelchair and adaptations made with support to left posterior side of w/c, with left lateral support. Analysis during activities to assess pt's ability to sit and interact with those around him, with good posture.
97760	Orthotic Management	Therapist fitted pt for R hand orthotic with pt tolerating 30 minutes, before complaints of pain. Splint removed and assessed skin for breakdown and redness. Observation of redness noted and Modification made to the splint in area of thenar eminence. Plan for next treatment to trail with new modifications to ensure proper fit and to educate pt and caregivers on use and application.

Skilled OT Interventions (Not all-inclusive listing)

General OT Skilled Interventions				
Compensatory techniques for ADLs *Adaptive techniques for ADLs* *Arthritic techniques/joint protection* *Bilateral integration for ADLs*	*Task segmentation* *Environmental adaptation* *Safety education* *Progressive ADL re-education*	*NDT* *PNF* *Desensitization* *Mobilization*	*Edema management* *Pain management* *Static/dynamic balance* *Postural control*	*Energy conservation* *Work Simplification* *Breathing techniques* *Tone management*

Self-care/ADLs	***Neuro re-Ed***	***Self-feeding***	***Orthotic Management***
Task Progression/ sequencing *Problem solving* *Task initiation* *Safety awareness* *Self-correction during task performance* *Anticipatory responses* *Transfers for ADLs* *Postural adjustments for ADLs* *Trunk/pelvic rotation during dressing, toileting, etc.* *Trunk flexion during lower body dressing* *Balance for ADLs* *Crossing midline* *Righting responses* *Visual perceptual training* *Cognitive training* *Adaptive equipment training* *Energy conservation techniques* *Environmental modifications* *Fine motor control* *Proximal stability* *Eye-hand coordination* *Gaze adjustment* *Target identification* *Grasp-release* *Object manipulation* *Hemiplegic dressing techniques* *Joint protection* *Home assessment for ADLs* *Home Modification* *Kitchen safety, meal preparation, modification* *Bilateral integration*	*PNF* *Facilitation/Inhibition of abnormal tone* *Evaluation of balance levels* *Balance strategy training* *Postural response training* *Hemiplegic techniques* *Sensory retraining* *Desensitization* *Static/dynamic balance re-education* *Facilitation of righting reactions* *Facilitation of head/trunk control* *Developmental sequencing* *Balance challenges outside BOS*	*Adaptive equipment training* *Compensatory strategies* *Fine motor coordination* *Object placement/release* *Cognitive training* *Wheelchair/Chair positioning* *Environmental modifications* *Plate/utensil layout* *Visual perceptual training* *Education-diet restrictions/strategies* *Hand over hand* *Task sequencing* *Staff/caregiver training*	*Tone management* *Proper fitting/Modifications* *Functional activity training* *Pt/caregiver training* *Wearing schedule* *Skin check* *Skin Hygiene*
	Therex	***Bed mobility/ Xfers***	***Wheelchair Management***
	Isometric/isokinetic/isotonic *PRE* *Concentric/eccentric* *Closed/open chain* *Stretching* *Manual Resistive* *Reciprocal* *Prehensile strength* *Grasp/Release* *Free weight* *Circuit training* *Contract/Relax* *Rhythmic stabilization*	*Task progression/ sequencing* *Weight shifting* *Scooting* *Facilitation of righting tech.* *Compensatory strategies* *Hand/foot placement* *Positioning* *Segmental rotation of rolling* *Task initiation* *Pt/caregiver training* *Safety* *Joint protection* *Postural alignment*	*Positioning* *Safety* *Propulsion* *Parts management* *Task progression/ sequencing* *Energy conservation techniques* *Compensatory Strategies* *Modifications-brake extension, seating system, etc.* *Visual perceptual training*
